

## The Optima Solution

*Optima Engineering is a multidisciplinary, professional engineering design firm that provides cutting-edge solutions for buildings of all types. With more than 15 years of experience, Optima has developed a design process that is systematic, transparent and communicative throughout each phase of a project.*

## We Do It All

Our engineering expertise includes mechanical, electrical, plumbing, lighting design, fire protection, sustainable design, commissioning and energy audits.

From amusement parks and schools to high-rise buildings and health care facilities, no job is too big or too small. We deliver engineering solutions on every scale.

## Forward Thinking

We believe in sustainable design and base our decisions on that philosophy. Optima's goal is to create zero-energy buildings that produce as much energy as is consumed. In fact, our own offices have been certified LEED Platinum by the U.S. Green Building Council.

We also evaluate existing facilities and develop strategies to reduce their carbon footprint. After performing a comprehensive energy audit, we will partner with you to achieve:

- » Energy reduction
- » Improved indoor air quality
- » Greater water conservation
- » Optimization of operational and maintenance practices
- » Reduced operating expenses

Not only is sustainable design better for the environment, it also reduces operating costs while improving the health and comfort of building occupants.
